Question: Write a program for error detecting code using CRC-CCITT (16 bits).

Aim: Error detection using CRC

Program:

```

def xor1(a,b): H, R, S, T, A1, D1 = "0000000000000000"
    x = " "
    for i in range(1, len(a)):
        if a[i] == b[i]:
            H = H + "0"
        else:
            H = H + "1"
    return H
    print("The given code and divisor is")
    def modulo2(divident, divisor):
        divlen = len(divisor)
        temp = divident[0:divlen]
        while (divlen < len(divident)):
            if temp[0] == "1":
                temp = xor1(temp, divisor)
                temp = temp[1:divlen] + divident[divlen]
            else:
                temp = temp[1:divlen] + divident[divlen]

```
